

EVALUATION PARAMETERS

WEB INNOVATION UNLEASHED

Parameter	Weightage
Functionality Testing	30
UI and Accessibility Testing	20
Source Code	15
Compatibility Testing	10
Documentation	10
Plagiarism Testing	10
Ontime Submission	5
Total	100

WEB INNOVATION UNLEASHED (PARAMETERS)

Functionality Testing	Check the functionality of the solution w.r.t given functional requirements in the SRS. If all of the requirements are met, then it deserves a high score.
UI & Accessibility Testing	Check for user-friendliness of the UI, smooth navigation, clear navigational elements (like buttons, arrows, menus, scroll elements, and so on.). Clear and legible fonts and colors, for accessibility. Test the Website application for responsiveness on different gadgets/sites simulating gadgets.
Source Code	Check the source code. Technologies used, programming approach, and project structure (for example, images placed in images folder, style sheets placed in css folder and so on). Check whether appropriate commenting has been given.
Compatibility Testing	Test with at least 3 to 4 browsers: Firefox, Chrome, Edge, and Opera. The site should work well and consistently across all popular browsers.
Documentation	Documentation must be present in the form of a Project Report with problem statement, diagrams, description of modules/logic used, tasks allotted to team, and so on.
Plagiarism Testing	Verify originality of code. Must not be copy-pasted from existing Websites as is. Check if code looks to be purely AI-generated. AI tools are permitted ONLY for image generation and nothing else.
On-time Submission	Submitted on time or not.

END-TO-END WEB SOLUTIONS

Parameter	Weightage
Functionality Testing	35
UI and Accessibility Testing	15
Source Code	10
Database Testing	10
Compatibility Testing	5
Documentation	10
Plagiarism Testing	10
Ontime Submission	5
Total	100

END-TO-END WEB SOLUTIONS (PARAMETERS)

Functionality Testing	Check the functionality of the solution w.r.t given functional requirements in the SRS. If all of the requirements are met, then it deserves a high score.
UI & Accessibility Testing	Check for user-friendliness of the UI, smooth navigation, clear navigational elements (like buttons, arrows, menus, scroll elements, and so on.). Clear and legible fonts and colors, for accessibility. Test the Web application for responsiveness on different gadgets/sites simulating gadgets.
Source Code	Check the source code. Technologies used, programming approach, and project structure (for example, images placed in images folder, style sheets placed in css folder and so on). Check whether appropriate commenting has been given. Coding conventions are recommended, but not mandatory.
Database Testing	Ensure database scripts (such as .sql files) are provided. Check for database and table structure. Design of keys, constraints, and relationships.
Compatibility Testing	Test with at least 3 to 4 browsers: Firefox, Chrome, Edge, and Opera. The site should work well and consistently across all popular browsers.
Documentation	Documentation must be present in the form of a Project Report with problem statement, diagrams, description of modules/logic used, tasks allotted to team, and so on.
Plagiarism Testing	Verify originality of code. Must not be copy-pasted from existing Web applications as is. Check if code looks to be purely AI-generated. AI tools are permitted ONLY for image generation and nothing else.
Ontime Submission	Submitted on time or not.

MULTI-PLATFORM APP COMPUTING

Parameter	Weightage
Functionality Testing	35
UI and Accessibility Testing	20
Source Code	10
Database Testing	5
Compatibility Testing	5
Documentation	10
Plagiarism Testing	10
Ontime Submission	5
Total	100

MULTI-PLATFORM APP COMPUTING (PARAMETERS)

Functionality Testing	Check the functionality of the solution w.r.t given functional requirements in the SRS. If all of the requirements are met, then it deserves a high score.
UI & Accessibility Testing	Check for user-friendliness of the UI, smooth navigation, clear navigational elements (like buttons, arrows, menus, scroll elements, and so on.). Clear and legible fonts and colors, for accessibility. Test the working of the app on emulator for functionality and responsiveness.
Source Code	Check the source code. Technologies used, programming approach, and project structure. Check whether appropriate commenting has been given. Coding conventions are recommended, but not mandatory.
Database Testing	Ensure database scripts (such as .sql files) are provided. Check for database and table structure. Design of keys and constraints and relationships.
Compatibility Testing	Test with different sizes of screens in emulators.
Documentation	Documentation must be present in the form of a Project Report with problem statement, diagrams, description of modules/logic used, tasks allotted to team, and so on.
Plagiarism Testing	Verify originality of code. Must not be copy-pasted from existing cross-platform applications as is. Check if code looks to be purely AI-generated. AI tools are permitted ONLY for image generation and nothing else.
Ontime Submission	Submitted on time or not.

SMART IOT REVOLUTION

Parameter	Weightage
Functionality Testing	35
Scalability	5
Source Code	10
Database Testing	5
Working Model	20
Documentation	10
Plagiarism Testing	10
Ontime Submission	5
Total	100

SMART IOT REVOLUTION (PARAMETERS)

Functionality Testing	Check the functionality of the solution w.r.t given functional requirements in the SRS. If all of the requirements are met, then it deserves a high score.
Scalability	The system should be scalable to add/delete sensors and users in the database for future scope implementation.
Source Code	Check the source code. Technologies used, programming approach, project structure. Check whether appropriate commenting has been given. Coding conventions are recommended but not mandatory.
Database Testing	Check for database and for cloud storage. The credentials of the user has to be shared to access the cloud database.
Working Model	Check the implementation of the project and the working model for which the student will send us the video clip of the actual working of the system. Complete implementation of the project using all the sensors deserves high score.
Documentation	Documentation must be present in the form of a Project Report with problem statement, diagrams, description of modules/logic used, tasks allotted to team, pin configuration details, and so on.
Plagiarism Testing	Verify originality of code. Must not be copy-pasted from existing projects as is. Check if code looks to be purely AI-generated. AI tools are permitted ONLY for image generation and nothing else.
Ontime Submission	Submitted on time or not.

DATA SCIENCE INTELLIGENCE ARENA

Parameter	Weightage
Functionality & SRS Compliance	20
Big Data Processing & Data Engineering	15
Data Science & Machine Learning Model Quality	20
Dual-Pipeline Verification & Hidden Data Testing	15
Source Code Quality & Technical Implementation	10
UI, Dashboard & Business Insights	5
Testing, Performance & Scalability	5
Documentation & Published Blog	5
Plagiarism & AI-Usage Compliance	3
On-Time Submission	2
Total	100

DATA SCIENCE INTELLIGENCE ARENA (PARAMETERS)

Functionality & SRS Compliance	Checks whether all required features work correctly and meet the SRS requirements.
Big Data Processing & Data Engineering	Evaluates data ingestion, cleaning, transformation, integration, Spark processing, and large-data handling.
Data Science & Machine Learning Model Quality	Checks model selection, training, validation, accuracy, forecasting quality, and use of suitable evaluation metrics.
Dual-Pipeline Verification & Hidden Data Testing	Evaluates whether both pipelines work independently and produce reliable results on unseen test data.
Source Code Quality & Technical Implementation	Checks code structure, readability, modularity, correctness, error handling, and technical implementation.
UI, Dashboard & Business Insights	Evaluates usability, dashboard quality, visualizations, filters, and clarity of business insights.
Testing, Performance & Scalability	Checks test coverage, execution speed, reliability, and ability to handle larger datasets.
Documentation & Published Blog	Evaluates completeness and clarity of project documentation and the technical blog.
Plagiarism & AI-Usage Compliance	Checks originality, absence of copied work, proper AI-use declaration, and team understanding of submitted work.
On-Time Submission	Checks whether all required project deliverables are submitted within the specified deadline.

NEXTWAVE AI AND ML

Parameter	Weightage
Functionality & SRS Compliance	20
Dataset Quality, Pre-processing & Feature Engineering	10
Python Machine Learning Model Quality	15
Google Teachable Machine Model Quality	10
Dual-Model Comparison, Rule Validation & Hidden Testing	15
Source Code Quality & Technical Implementation	10
UI, Dashboard & User Experience	5
Testing, Performance & Scalability	5
Documentation & Published Blog	5
Plagiarism & AI-Usage Compliance	3
On-Time Submission	2
Total	100

NEXTWAVE AI AND ML (PARAMETERS)

Functionality & SRS Compliance	Checks whether all required application features work correctly and meet the functional and non-functional requirements defined in the SRS.
Dataset Quality, Pre-processing & Feature Engineering	Evaluates the quality, balance, realism, preparation, cleaning, transformation, and feature creation of the warranty claim dataset used for model development.
Python Machine Learning Model Quality	Evaluates algorithm selection, model training, validation, testing, accuracy, precision, recall, F1-score, confusion matrix, and overall prediction reliability.
Google Teachable Machine Model Quality	Checks the quality of Claim Summary Card images, class preparation, model training, testing, confidence scores, and independent prediction performance of the Teachable Machine model.
Dual-Model Comparison, Rule Validation & Hidden Testing	Evaluates comparison between the Python and Teachable Machine predictions, confidence differences, warranty-rule validation, disagreement handling, and performance on unseen claims.
Source Code Quality & Technical Implementation	Checks code structure, readability, modularity, correctness, configuration management, error handling, GitHub implementation, and absence of hard-coded results.
UI, Dashboard & User Experience	Evaluates the usability, navigation, responsiveness, claim workflow, dashboards, prediction displays, alerts, and clarity of information presented to users.
Testing, Performance & Scalability	Checks functional and technical testing, execution speed, error handling, reliability, boundary cases, and the ability of the application to handle increasing numbers of claims.
Documentation & Published Blog	Evaluates the completeness and clarity of the project documentation, technical explanation, model details, testing evidence, limitations, and published technical blog.
Plagiarism & AI-Usage Compliance	Checks whether the project is original, avoids copied work, properly declares AI-tool usage, and demonstrates that team members understand and verify all submitted work.
On-Time Submission	Checks whether all mandatory project files, reports, models, source code, datasets, links, and other deliverables are submitted within the specified deadline.

UNITY GAME FOUNDRY

Parameter	Weightage
Functionality Testing	35
UI and Accessibility Testing	15
Source Code	10
Database Testing	5
Compatibility Testing	5
Documentation	10
Plagiarism Testing	10
AI Integration	5
Ontime Submission	5
Total	

UNITY GAME FOUNDRY (PARAMETERS)

Functionality Testing	Check the functionality of the solution w.r.t given functional requirements in the SRS. If all of the requirements are met, then it deserves a high score.
UI & Accessibility Testing	Check for user-friendliness of the UI, smooth navigation, clear navigational elements (like buttons, arrows, menus, scroll elements, and so on.). Clear and legible fonts and colors, for accessibility.
Source Code	Check the source code. Technologies used, programming approach, project structure. Check whether appropriate commenting has been given. Coding conventions are recommended but not mandatory.
Database Testing	Check for database and table structure. Design of keys and constraints and relationships.
Compatibility Testing	Test on Windows OS and macOS. The application should work well and consistently across the platforms.
Documentation	Documentation must be present in the form of a Project Report with problem statement, diagrams, description of modules/logic used, tasks allotted to team, and so on.
Plagiarism Testing	Verify originality of code. Must not be copy-pasted from existing game applications as is.
AI Integration	Check whether appropriate AI libraries have been used in the source code to implement the AI functionality expected in the SRS.
Ontime Submission	Submitted on time or not.

GENERATIVE AI POWERPLAY

Parameter	Weightage
Functionality & SRS Compliance	20
GenAI Integration, Prompting & Structured Output	15
Python Ground-Truth Validation & Rule Engine	15
Source Grounding, Traceability & Hallucination Control	10
Dual-Pipeline Comparison & Hidden Evaluation Testing	10
Source Code Quality & Technical Implementation	10
UI, Dashboard & User Experience	5
Security, Prompt-Injection & Testing	5
Documentation & Published Blog	5
Plagiarism & AI-Usage Compliance	3
On-Time Submission	2
Total	100

GENERATIVE AI POWERPLAY (PARAMETERS)

Functionality & SRS Compliance	Checks whether all required features of the application work correctly and meet the functional and non-functional requirements defined in the SRS.
GenAI Integration, Prompting & Structured Output	Check the source code. Technologies used, programming approach, project structure. Check whether appropriate commenting has been given. Coding conventions are recommended but not mandatory.
Python Ground-Truth Validation & Rule Engine	Checks whether the independent Python validation pipeline correctly verifies GenAI output against rules, requirements, source references, and the Role Requirement Matrix.
Source Grounding, Traceability & Hallucination Control	Evaluates whether generated content is supported by approved documents, maintains valid source references, and detects unsupported or hallucinated information.
Dual-Pipeline Comparison & Hidden Evaluation Testing	Checks whether GenAI and Python validation pipelines work independently, compare results correctly, and process unseen documents or roles without changing core code.
Source Code Quality & Technical Implementation	Evaluates code readability, modularity, correctness, configuration management, error handling, GitHub structure, and overall technical implementation.
UI, Dashboard & User Experience	Checks usability, navigation, responsiveness, dashboards, progress views, review screens, and clarity of information presented to users.
Security, Prompt-Injection & Testing	Evaluates API-key protection, access control, prompt-injection handling, adversarial input protection, and security and functional testing.
Documentation & Published Blog	Checks completeness and clarity of project documentation, technical explanations, implementation details, testing evidence, limitations, and published blog.
Plagiarism & AI-Usage Compliance	Evaluates originality of the project, proper AI-tool declaration, absence of copied work, and the team's understanding of AI-assisted code and content.
On-Time Submission	Checks whether all mandatory project deliverables are submitted within the specified competition deadline.

ETHICAL CYBER HORIZONS

Parameter	Weightage
Functionality Testing	30
Source Code/Scripts	10
Working Model	20
UI and Accessibility Testing	10
Scalability	10
Documentation	5
Plagiarism Testing	10
Ontime Submission	5
Total	100

ETHICAL CYBER HORIZONS (PARAMETERS)

Functionality Testing	Check the functionality of the solution w.r.t given functional requirements in the SRS. If all of the requirements are met, then it deserves a high score.
Source Code/Scripts	Check the source code. Technologies used, programming approach, project structure. Check whether appropriate commenting has been given. Coding conventions are recommended but not mandatory.
Working Model	Check the implementation of the project and the working model for which the student will send us the video clip of the actual working of the system. Complete implementation of the project using all the tools deserves high score.
UI and Accessibility Testing	Check that all custom dashboards, reporting tools, or scripts produce clear outputs, and ensure reports and results are easily readable and understandable by all intended users.
Scalability	The system should be scalable to add or remove targets, tools, and user profiles in the lab environment to accommodate future ethical hacking exercises and project expansions.
Documentation	Documentation must be present in the form of a Project Report with problem statement, diagrams, description of modules/logic used, tasks allotted to team, target scope, tools, configuration, execution steps, safety measures and ethical considerations.
Plagiarism Testing	Verify originality of code. Must not be copy-pasted from existing projects as is. Check if code looks to be purely AI-generated. AI tools are permitted ONLY for image generation and nothing else.
Ontime Submission	Submitted on time or not.

DIGITAL MARKETING FRONTIERS

Parameter	Weightage
Campaign Strategy and Planning	10
Landing Page Functionality, UI, and User Journey	20
Content, Creatives, and Channel Implementation	10
Audience and Market Understanding	10
KPI Tracking, Measurement and Campaign Insights	10
SEO and Digital Discoverability	10
Documentation, Ethical Compliance, and Final Pitch	15
Originality and Content Authenticity	10
Ontime Submission	5
Total	100

DIGITAL MARKETING FRONTIERS (PARAMETERS)

Campaign Strategy and Planning	Check whether the campaign has a clear objective, suitable strategy, campaign plan, target outcomes and appropriate selection of digital marketing activities.
Landing Page Functionality, UI, and User Journey	Check whether the landing page/prototype works correctly during the live demo. Evaluate navigation, buttons, links, forms, CTAs, responsiveness, readability, usability, and the complete user journey from campaign entry to the intended action or conversion.
Content, Creatives, and Channel Implementation	Check during the live demo whether the campaign content and creatives are relevant, clear and consistent. Evaluate whether suitable digital channels are selected and whether the team demonstrates how the creatives connect to the landing page and intended user journey.
Audience and Market Understanding	Check whether the target audience, personas, customer needs and market are clearly identified and whether the campaign is appropriately designed for the intended audience.
KPI Tracking, Measurement and Campaign Insights	Check whether relevant KPIs are identified, sample results are presented, and suitable campaign insights actions are suggested.
SEO and Digital Discoverability	Check whether relevant keywords, basic SEO practices and suitable discoverability methods are used to improve campaign visibility.
Documentation, Ethical Compliance and Final Pitch	Check whether the documentation clearly presents the campaign approach, implementation and outcomes, follows ethical compliance requirements, and whether the final pitch is clear, complete and convincing.
Originality and Content Authenticity	Verify the originality of campaign content, creatives, reports and other submitted material. Content should not be directly copied from existing websites, campaigns, published sources or other projects. However, AI-generated assets such as images are permitted.
Ontime Submission	Check whether the complete project and all required deliverables are submitted within the specified deadline.
